

Risk-Free Locums MSP Evaluation

Choosing the right managed service provider (MSP) can be challenging, whether you're switching locums partners or exploring an MSP for the first time. Aya Healthcare's risk-free evaluation program lets you compare solutions side-by-side so you can make an informed, data-driven decision before committing.

What is an MSP?

An MSP combines advanced vendor management system (VMS) technology, like Aya Healthcare's industry-leading platform LotusOne, with expert-level support to simplify locums management.

Aya Healthcare's MSP provides access to high-quality locums at the best rates through our advanced digital tools and Partner Network of 80+ locum agencies. A dedicated account manager serves as your single point of contact, handling administrative tasks and internal communications to keep everything running smoothly.

Who should consider this?

- Healthcare organizations currently using an MSP but seeking better results
- Organizations exploring an MSP solution for the first time
- Teams looking to evaluate service, fill rates and cost-effectiveness before committing

How does it work?

1. Choose a trial period (4-6 months is recommended)
2. Current MSP users, run both MSPs side-by-side. (New to an MSP? Begin your risk-free trial.)
3. Compare key performance metrics and service quality
4. Evaluate delivery, service and cost
5. Make an informed decision based on real results

What are the main benefits?

- **No risk, no disruption.** Keep your current MSP provider or assess if an MSP model is right for you while evaluating our service.
- **Direct performance comparison.** Compare fill rates, time-to-fill, candidate quality and service in real time.
- **Seamless implementation.** Try our advanced VMS, LotusOne, and hands-on support without a long-term commitment.
- **Data-driven decision making.** Get clear, measurable results through spend reports, performance data and usage indicators so you can transition with confidence.

How do I get started?

- Schedule a consultation to discuss your needs
- Define your trial scope and success metrics
- Set your evaluation period
- Launch your side-by-side implementation
